# Eye Morphology HRWLLA_EYE_003

## Purpose

To detect abnormalities in eye morphology.

## Experimental Design

- **Minimum number of animals :** 7M + 7F
- **Age at test:** Week 58
- **Sex:** We do not expect the results of this test to show sexual dimorphism

## Procedure

1. Examine the anterior of both eyes (e.g. with slit lamp) and record any abnormalities
2. Test the iris/pupil light response
3. Image abnormal eyes as a minimum or all eyes if capacity permits
4. Dilate both eyes
5. Examine the anterior and posterior of both dilated eyes (e.g. with slit lamp and ophthalmoscope) and record any abnormalities
6. Image abnormal eyes as a minimum or all eyes if capacity permits

OCT:

1. Turn on the OCT and start the database
2. Anaesthetize mouse
3. Prepare mouse eyes with drops and place contact lens (focal length 10 mm) on the right eye
4. Enter mouse data in the "Create new patient file" area and switch to the "Acquisition" window
5. Move the OCT camera to the right position and activate measurement modus
6. Place mouse collaterally to the OCT camera on the right side of a platform that is fixed in front of the OCT lens
7. Search the contact lens in the live picture of the fundus image field and place the pupil of the mouse eye in the centre of the window
8. Move the OCT camera such that OCT lens and contact lens touch each other
9. Focus the fundus picture by slightly moving up/down or forward/backward
10. Save fundus images
11. Set the "Ref.Arm" ruler such that the section of the retina is placed in the centre of the blue rectangle
12. Set the mode of measurement on "vertical, horizontal line"
13. Move the blue horizontal line in the fundus image field to the optic nerve level
14. Save images of retinal sections
15. Move the OCT camera to the left position

16. Repeat measurement procedure for the left eye

Scheimpflug Imaging:

1. Turn on the Pentacam and start the patient data management
2. Apply one drop 0.5% Atropine to each mouse eye for pupil dilation
3. Enter mouse data in the "Patient" group box and switch to the Scan menu
4. Activate the "1 Picture" modus in the "Image Options" area
5. Move Pentacam to the right position
6. Hold the mouse on a platform such that the vertical LED 475 nm light slit is orientated in the center of the right eye ball
7. Guarantee optimal focus by using the fine adjustment software tool in the adjustment window
8. Start imaging manually by pressing the "Start Scan" button
9. Scheimpflug images are saved automatically
10. Move Pentacam to the left position
11. Repeat measurement procedure for the left eye

## Notes

- As a minimum, all abnormalities should be imaged.
  - Where capacity permits, all mice can be imaged

- Majority of parameters can be analysed using the standard approach for assessing categorical data. To increase power for analysis purposes, where an abnormality is detected in the left, right or both eyes, the data may be combined to generate one "abnormal" category.

- Data for both eyes is recorded under one parameter to distinguish phenotypes of incomplete penetrance in individuals and if an observation for one or both eyes cannot be made, this is recorded as 'no data'. The IMPC analysis pipeline does not take into account whether an abnormality is fully penetrant or not and the same weight is given for an abnormal observations in one or both eyes. In cases where it is not possible to confirm if an abnormality is present or not, the data is not included in the statistical analysis. The following logic is applied in determining whether to include the data in analysis:
  - If at least one of the eyes shows an abnormality in a particular parameter, the data for that specimen will be included in the statistical analysis even if the other eye is marked as "no data".
  - If the eyes are marked as "no data", or one eye is normal and the other eye is "no data" for a particular parameter the data for that specimen will not be included in the statistical analysis.

### Data QC

Image QC is typically performed during data collection to ensure high quality images are captured whilst eyes are dilated etc.

## Parameters and Metadata

# Eye HRWLLA_EYE_001_001 | v1.0

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Description:** eye

**Options:** present, absent left eye, absent right eye, absent both eyes,

-------------------------------------------------------------------------

# Bulging eye HRWLLA_EYE_002_001 | v1.0

simpleParameter

**Req. Analysis:** false        **Req. Upload:** false        **Is Annotated:** true

**Description:** bulging_eye

**Options:** absent, no data left eye, no data right eye, present left eye, present right eye, present both eyes, no data for both eyes, no data left eye, present right eye, no data right eye, present left eye,

## Corneal Sclerization HRWLLA_EYE_080_001 | v1.1
simpleParameter

**Req. Analysis:** false **Req. Upload:** false **Is Annotated:** true

**Options:** absent, no data left eye, no data right eye, no data for both eyes, present left eye, present right eye, present both eyes, no data left eye, present right eye, no data right eye, present left eye,

---

## Corneal deposits HRWLLA_EYE_081_001 | v1.1
simpleParameter

**Req. Analysis:** false **Req. Upload:** false **Is Annotated:** true

**Options:** absent, no data left eye, no data right eye, no data for both eyes, present left eye, present right eye, present both eyes, no data left eye, present right eye, no data right eye, present left eye,

---

## Iris transilumination HRWLLA_EYE_082_001 | v1.1
simpleParameter

**Req. Analysis:** false **Req. Upload:** false **Is Annotated:** true

**Options:** normal, no data left eye, no data right eye, no data for both eyes, left eye abnormal, right eye abnormal, both eyes abnormal, no data left eye, right eye abnormal, no data right eye, left eye abnormal,

---

------------------------------------------------------------------------------------------

## Vitreous HRWLLA_EYE_083_001 | v1.1

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Options:** normal, no data left eye, no data right eye, no data for both eyes, left eye abnormal,
right eye abnormal, both eyes abnormal, no data left eye, right eye abnormal,
no data right eye, left eye abnormal,

------------------------------------------------------------------------------------------

## Corneal mineralization HRWLLA_EYE_084_001 | v1.0

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Options:** absent, present left eye, present right eye, present both eyes, no data left eye,
no data right eye, no data for both eyes, no data left eye, present right eye,
no data right eye, present left eye,

------------------------------------------------------------------------------------------

## Corneal ulcer HRWLLA_EYE_085_001 | v1.0

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Options:** absent, present left eye, present right eye, present both eyes, no data left eye, no data right eye, no data for both eyes, no data left eye, present right eye, no data right eye, present left eye,

--------------------------------------------------------------------------------

# Lacrimation HRWLLA_EYE_086_001 | v1.0

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Options:** absent, present left eye, present right eye, present both eyes, no data left eye, no data right eye, no data for both eyes, no data left eye, present right eye, no data right eye, present left eye,

--------------------------------------------------------------------------------

# Right vitreous humor thickness HRWLLA_EYE_087_001 | v1.0

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Unit Measured:** um

--------------------------------------------------------------------------------

# Left vitreous humour thickness HRWLLA_EYE_088_001 | v1.0

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Unit Measured:** um

--------------------------------------------------------------------------------

# Ophthalmoscope Lens Model HRWLLA_EYE_089_001 | v1.1

procedureMetadata

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** false

--------------------------------------------------------------------------------

# Right eye diameter HRWLLA_EYE_090_001 | v1.0

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Unit Measured:** mm

--------------------------------------------------------------------------------

# Left eye diameter HRWLLA_EYE_091_001 | v1.0

simpleParameter

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Unit Measured:** mm

--------------------------------------------------------------------------------

# Retina (combined) HRWLLA_EYE_092_002 | v2.0

**Req. Analysis:** false          **Req. Upload:** false          **Is Annotated:** true

**Options:** normal, no data left eye, no data right eye, left eye abnormal, right eye abnormal, both eyes abnormal, no data for both eyes, no data left eye, right eye abnormal, no data right eye, left eye abnormal,

-----------------------------------------------------------------------------------------
